

Intellitech IT-PS24 chassis based Production Switcher allows you to bring multiple video sources and switch between them while you are recording or live streaming. These sources include camera feeds, presentation slides, remote guests, pre-recorded video sources or shared screens. You can normally add transition effects to make it appear even more professional. To add additional production value for your multi-camera production, you can utilize video mixers' built-in graphic capabilities or leveraging external graphics generators to add

Logos, image overlays, lower-thirds, scoreboards, rolling texts, motion graphics and comment overlays to make the video or live stream more informative and engaging. Utilizing multiple video sources also allows for the creation of varied multiviews such as Picture in Picture, Side-By-Side, and Split Views to add depth and richness of your content and storytelling.
